Patch proposed:	Non		
Description			
Hi,			
When performing: <code>\$login->init_authn_request(undef, Lasso::Constants::HTTP_METHOD_REDIRECT);</code> <code>\$login->build_authn_request_msg();</code>			
I'm seeing the warning: Getting (process:16722): Lasso-DEBUG: func=xmlSecKeyDuplicate:file=keys.c:line=670:obj=unknown:subj=key != NULL:error=100:assertion:			
System Info: CentOS 6.7 xmlsec1 1.2.20.4.el6 xmlsec1-openssl 1.2.20.4.el6			
Lasso Info: Lasso-2.5.1 Using Perl bindings			
I've deployed the same version of Lasso on Ubuntu 14.04, and not observing the error there. XmlSec is @ 1.2.18 on Ubuntu.			
Requesting Action: Please suggest cause and resolution if possible.			
Thank you! Michael

- Fichier sp-metadata.xml ajouté

Hi Benjamin,

Sorry for taking so long to reply. I did not realize someone got back to me since I was expecting an automated email notification.

Attached is a code snippet to reproduce. I've only included the SP metadata since it's the only common denominator I could think of, since the same issue would happen for different IdP providers.
