

RFC3161 for Python - Bug #12835

Please add code for certificate verification when the TSA provides the certificate

05 août 2016 10:04 - Kiril Grancharov

Description			
This is something that I've described here http://stackoverflow.com/questions/38717609/python-rfc3161-verification-failed-but-openssl-verification-is-ok			
You can use the patched api.py file I've posted here or follow the stackoverflow answer. The posted file uses pyOpenSSL while the answer uses M2Crypto

Hi,

Sorry for the delay, could you separate the replacement of M2Crypto by pyOpenSSL (i would prefer python-cryptography which is more hype these days), the handling of attributeSet (with some explanations) and the reformatting of the whole file ? Integrating your is difficult as is, and the change from M2Crypto to pyOpenSSL would need to be advocated (what does it improve?).
