Description

I followed the documentation to add an attribute in the SAML assertion when Authentic is IDP (SAMLResponse). It seems to work, but do you know if there is a way to update the IDP's metadata ? I want that my IDP's metadata shows that this attribute is supported.

According to the standard this is not required, but I was wondering if there is a way to do that automatically and not by hand.

What do you think about that ?

Regards,

Historique

Metadata generation is implemented in [source:authentic2/saml/common.py](#) in the function `get_saml2_metadata()` which using the `Saml2Metadata` class from [source:authentic2/saml/saml2utils.py](#). It should be possible to extend the generator to support declarations of attributes.

`get_saml2_metadata()` is called by the metadata endpoint in the file [source:idp/saml/saml2_endpoints.py](#). But currently there is not setting to specify the list of supported attributes, it could be something hardoced in the `settings.py`. That's a bit hacky but fast to implement so I'm not sure we would welcome the patch.
