

Authentic 2 - Development #14070

possibility for a plugin to run code on user logging in

24 novembre 2016 11:26 - Frédéric Péters

Statut:	Rejeté	Début:	24 novembre 2016
Priorité:	Haut	Echéance:	
Assigné à:		% réalisé:	0%
Catégorie:		Temps estimé:	0:00 heure
Version cible:		Planning:	
Patch proposed:	Non		
Description			
The idea is to call some webservice to update user information (from the belgian national register) whenever they log in.

Would `authentic2.utils.login()` be a good placement for this callback ?

Yes, this looks like something that should be at the same level as `record_authentication_event`.

- *Priorité changé de Normal à Haut*

(change of priority because I need it for Liege but I can probably do the patch by myself)

#3 - 17 janvier 2017 12:55 - Benjamin Dauvergne

On each login the generic signal from Django is also called (`django.contrib.auth.signals.user_logged_in`), you could connect your code to this signal from the `ready()` method of the `AppConfig` object of your plugin.

- *Statut changé de Nouveau à Rejeté*

This works fine with the existing signal; thanks.
