Description

Vu sur #23837, un calcul d'une condition sur une action qui ne reçoit aucune variable du formulaire (contexte quasi vide).

workflows: handle concerned/actions roles with conditions on actions (#23839)

When a workflow is changed security details of all related have to be recomputed (rebuild_security). With the introduction of conditions on actions this process now requires to have objects available in the context for evaluating conditions.

Historique

#2 - 15 mai 2018 11:52 - Thomas Noël

Et plus bas dans la trace, la cause du calcul des conditions :

```
File "/usr/lib/python2.7/dist-packages/wcs/workflows.py", line 350, in store
  348         # instruct all related formdefs to update.
  349         for form in FormDef.select(lambda x: x.workflow_id == self.id, ignore_migration=True):
>  350             form.data_class().rebuild_security()
  351             if must_update:
  352                 form.rebuild()
```

C'est ici qu'il manque des feed() pour avoir le contexte.

- Assigné à mis à Frédéric Péters

#5 - 15 mai 2018 13:02 - Frédéric Péters

- Fichier 0001-workflows-handle-concerned-actions-roles-with-condit.patch ajouté

- Statut changé de Nouveau à En cours

- Patch proposed changé de Non à Oui

#6 - 15 mai 2018 13:51 - Thomas Noël

Ack.

(Le mini truc qui me mini chiffonne c'est qu'on calcule encore un peu trop, parce que la présence d'un "by" dans une action n'est pas suffisante pour savoir si elle est interactive: on a un by dans wcs/wf/export_to_model.py (utilisé seulement si method=='interactive'), wcs/wf/jump.py (utilisé seulement en cas de trigger). Mais c'est une mini-optimisation sans vrai impact concret, et surtout à demander dans un autre ticket, hop)
