Description

I tried to build packages for CentOS 8 but I did not manage to have the python binding files, so it fails at the end with:

```
Erreur de construction de RPM :
  Fichier non trouvé : /home/ow2/build/BUILDROOT/lasso-2.6.1-1.el8.x86_64/usr/lib64/python2.7/site-packages/lasso.py*
  Fichier non trouvé : /home/ow2/build/BUILDROOT/lasso-2.6.1-1.el8.x86_64/usr/lib64/python2.7/site-packages/_lasso.so
```

I join a full log it this can help.

Historique

#1 - 29 avril 2020 22:02 - Frédéric Péters

checking for Python development files... no

Probably just that; python3-devel (I guess) should be added to build-depends.

#2 - 29 avril 2020 22:22 - Clément Oudot

Thanks a lot, I was trying to build with python2, but this does not seems to work on CentOS 8. I had no issue with this on CentOS 7.

I'm trying with python3 now.

#3 - 29 avril 2020 22:46 - Clément Oudot

It works with python3 and these adaptations in spec file:

<https://github.com/LemonLDAPNG/lasso-rpm/commit/a34e89993f0a65ca6376dc11edca44660ab595d4>

Thanks for the quick support and good night ;)

#4 - 30 avril 2020 08:30 - Frédéric Péters

- Statut changé de Nouveau à Fermé

Excellent.
