

Authentic 2 - Support #5455

Update documentation

10 September 2014 04:21 PM - Benjamin Dauvergne

Status:	Nouveau	Start date:	03 December 2014
Priority:	Normal	Due date:	
Assignee:	Gestion d'identité	% Done:	81%
Category:	Documentation	Estimated time:	0:00 hour
Target version:	2.2.0	Planning:	No
Patch proposed:	No		
Description			
Documentation is currently out of date, a new toc should be made, obsolete sections should be removed or moved to externalised plugins and obsolete informations should be fixed.			
Subtasks:			
Support # 6047: Section fonctionnement des settings			Fermé
Support # 6048: Complete the section settings list			Fermé
Support # 6049: Update references to settings			Fermé
Support # 6050: Update upgrading section			Fermé
Support # 6051: Remove the FAQ style (rewrite section title written as question)			Nouveau
Support # 6052: Rewrite attribute section			Fermé
Support # 6053: Write a quick start note for oauth2 idp			Fermé
Support # 6054: Write a quick start note for saml2 sp - google apps use case			Nouveau
Support # 6055: Check the section on how policy works			Fermé
Support # 6056: Add a section on user registration and emailing			Fermé
Support # 6057: Write a quick start note for saml2 idp			Fermé

Associated revisions

Revision e5ebc662 - 03 December 2014 05:24 PM - Mikaël Ates

documentation: refactor documentation (refs #5455).

Revision c3f8d5fe - 03 December 2014 05:24 PM - Mikaël Ates

documentation: remove old documentation files (refs #5455)

#2 - 12 October 2014 11:05 PM - Benjamin Dauvergne

Sections needing an update:

- settings (they are not fully covered, we should try to use directly the app_settings.py files to generate that doc if possible, to keep it covered at all times)
- LDAP as django-auth-ldap is not used anymore
- attribute management for SAML (attribute aggregator being deprecated)

Missing sections:

- basic user and group management using the new manager
- definition of attributes
- plugin system (how to make a plugin, what are the available hooks, idp interface and authentication frontend interface)
- Kerberos authentication (it's an external plugin but maybe should-it be integrated)
- OAuth2 IdP (idem)
- settings around self-service of users: my account, registration page, federation management, a kind of end-user manual.

More than work on specific topics what's needed it a reorganization, first installation&configuration, then usual management then advanced topics.

I have an initial proposal:

- Overview
 - Features
 - Source and issue tracker
 - Community support
- Installation
 - Installing (lasso&pip|debian)
 - Creating and initializing the db
 - Creating admin users
 - Running with apache/nginx & serving static files
- Configuration
 - Internal Django directory
 - Realms
 - Custom attributes
 - LDAP authentication
 - Realms
 - OpenLDAP case
 - AD case
 - Generic case (full description of the settings)
 - Kerberos authentication
 - CAS Authentication
 - Sessions&cookies
 - User self-service
 - Registration page
 - Password change
 - Profile page
 - SAML IdP settings
 - OAuth2 IdP settings
 - CAS IdP settings
 - OpenID IdP settings
 - Other settings
- Day to day management
 - Managing users
 - Managing roles/groups
 - Managing SAML service provider
 - Managing OAuth2 service providers
 - Managing CAS service providers
 - Backup and restore
 - using fixtures
 - using pg_dump / psql
- Advanced topics
 - Debugging
 - DEBUG=True
 - DEBUG_LOG
 - debug-toolbar
 - Writing plugins
 - IdP backend interface
 - Frontend interface
 - Authentication backends

We should not just document what exists, when existing is too difficult to document it should be changed. Separation between LibertyProvider, LibertyServiceProvider, SPOptionsIdPPolicy, LibertyProviderPolicy and AttributePolicy are artificial and should be removed. There should be only one object, SAMLServiceProvider that inherits from an abstract SAMLServiceProviderPolicyBase and can be linked to a concrete SAMLServiceProviderPolicy also.
