**Description**

There is a lot of replicated code in authentic2 to manipulate URLs, add or remove parameters, redirect to the login URL or another and keeping the current URL in the next parameter or for handling the login processing (record an authentication event, set the Django user in the session return to the next URL or settings.LOGIN\_REDIRECT\_URL). All this code can be factorized to shorten and simplify code and also to prevent errors.

Current version of this serie of patches is on <http://perso.entrouvert.org/~bdauvergne/git/cgi/authentic2.git/log/?h=wip/redirect-helper> starting with the commit "Add new utilities to help building URLs with parameters".

Add new utilities to help building URLs with parameters

Three new functions in authentic2.utils:  
- resolve\_url(), copied from Django 1.7  
- make\_url(), to build URLs eventually by keeping parameters from a request or adding new ones and using resolve\_url() to find the URL  
- redirect(), equivalent to django.shortcuts.redirect() but with the make\_url() features added.
