Description

With the new registration system the username is an opaque identifier, it shouldn't be editable, not even in /manage/

Historique

- Priorité changé de Normal à Bas

All users do not come from public registration, it's currently not easy to differentiate user sources. Apart from /manage and /admin where do you see it editable ?

#2 - 10 mars 2015 15:10 - Frédéric Péters

That was mostly a comment about the /manage/ page. In our current configuration it's especially treacherous to let the admin change usernames as they're used as federation key.

#3 - 10 mars 2015 15:39 - Benjamin Dauvergne

The problem is storing the uuid in the username, that's not its place; any field should have only one semantic whatever the user. Work on access control contains a new user class with an uuid field, in the meantime we should live with this problem.

To ease manipulation of registered user I advise using the A2_REGISTRATION_GROUP setting with a default value of "Online registration". It automatically adds registered to a group named "Online registration". If we need to migrate those user to a new uuid storage in the future it will help.

#4 - 23 mars 2015 16:39 - Benjamin Dauvergne

I set target release to future as for now it's not fixable.

#5 - 23 mars 2015 16:41 - Benjamin Dauvergne

- Version cible mis à future

#6 - 16 septembre 2015 15:15 - Benjamin Dauvergne

- Statut changé de Nouveau à Solution déployée

- Assigné à mis à Benjamin Dauvergne

- Version cible changé de future à 2.2.0

It's fixed by the custom user model, uuid is now stored in a different field.
