

Authentic 2 - Bug #6851

error when trying to change password

30 mars 2015 10:17 - Serghei Mihai

Statut:	Fermé	Début:	30 mars 2015
Priorité:	Normal	Echéance:	
Assigné à:	Benjamin Dauvergne	% réalisé:	100%
Catégorie:		Temps estimé:	0:00 heure
Version cible:	2.1.15	Planning:	
Patch proposé:	Oui		
Description			
When trying to change the password change page(accounts/password/reset/), the following error occurs			
<pre>Reverse for 'password_reset_done' with arguments '()' and keyword arguments '{} ' not found. 0 pattern(s) tried: []</pre>

accounts: use Django naming for password related views, keep previous name for retrocompatibility with already deployed themes (#6851)

Django 1.7 now use accounting view names directly in its code, they also changed the signature of the password_change_done view regexp (it expects a uidb64 argument instead of uidb36). To minimize difference with expected view names but to also keep retrocompatibility view names were renamed with the Django names and old declarations were kept but declared after the official ones such that they will never match a request but they can still be used for reversing view names.

- Patch proposed changé de Non à Oui

Django 1.7 now use accounting view names directly in its code, they also changed the signature of the password_change_done view regexp (it expects a uidb64 argument instead of uidb36). To fix this but to also keep retrocompatibility I changed our names for the Django names but I kept view declarations with the old names (and the old signature with uidb36).
