js: fix vitest version used (#84940)

## Historique

#1 - 19 décembre 2023 17:41 - Thomas Noël

Est-ce qu'on irait vers quelque chose comme :

```

--- a/setup-vitest.sh
+++ b/setup-vitest.sh
@@ -3,4 +3,4 @@
  pip install $*
  nodeenv --prebuilt --python-virtualenv
  source $VIRTUAL_ENV/bin/activate # source again to activate npm from env
-npm install -g vitest happy-dom
+npm install -g vitest@"<1.1.0" happy-dom

```

ou faut-il corriger/adapter les tests ?

C'est mieux de fixer la version, oui, si ça pète impromptu au rythme des changements cassants des développeurs de bibliothèques web, on est pas sortis.

Le mieux ça serait d'avoir un package.json mais je sais pas si les gens seront d'accord, en attendant je vais faire ça.
